List of Journals and other Serial Sources

Introduction

Input to the INSPEC database is prepared from the world's literature in the fields of physics, electrical engineering, electronics, computers and control. The publications scanned include journals, conference proceedings, books, reports and theses. The INSPEC *List of Journals and other Serial Sources* provides details of all regular journals, followed by a similar listing of all other serial publications which are regularly scanned for the database, e.g. series of monographs, annual reviews, report series etc.

Selection

Not all articles from the listed publications are abstracted. Selection depends on whether the individual article is of sufficient quality and falls within the INSPEC subject scope. However, a number of journals are central to the INSPEC subject field and of a quality such that, virtually without exception, all articles are abstracted. These journals are indicated in the list by the symbol †.

Availability of Listed Publications

INSPEC does not itself supply copies of the original articles. However, the main entry for each serial generally contains sufficient information about the publisher for an order to be made. Otherwise, to obtain copies of articles abstracted in the INSPEC information services consult your organisation's library, or your other local and national lending libraries. Should you still have difficulty in obtaining the material please consult the:

Key to examples

1. ***Abbreviated title and country of publication.***
   The form of abbreviation used in the title conforms to ISO 4-1972(E) International code for the abbreviation of titles of periodicals and ISO 833-1974(E) International list of periodical title word abbreviations.

2. ***First issue covered by INSPEC.*** Details are given of the first issue covered. Records are only available for journals added since 1968. For journals covered since 1968 or earlier the entry will therefore be (1968 –)

3. ***Coden*** — this is a five-character unique code intended to identify the title for computer handling of serial titles. A sixth-character check digit has been added. The source for Coden is:

   International Coden Service
   c/o Chemical Abstracts Service
   The Ohio State University
   Columbus Ohio 43210
   USA

4. ***ISSN*** — the ISSN (International Standard Serial Number) also provides a unique identification for serial titles. ISSN are assigned by International Serials Data System (ISDS) national centres which are coordinated by the ISDS International Centre in Paris. The format of ISSN complies with ISO 3297-1975E *Documentation — International Standard Serial Numbering (ISSN).*

5. ***Abstracted completely***

6. ***Full title***

7. ***Publisher's name and address.***

8. ***Title cross reference.*** The cross reference entries are provided to assist the user in locating titles within the list. Cross reference entries have generally been used where:
   - i) there is a foreign language form of the title
   - ii) there is an alternative form of the title
   - iii) the title begins with a generic term such as 'Bulletin', 'Journal', 'Report' etc. rather than the name of the organisation issuing the serial. In this case a cross reference is made from the name of the organisation.
   - iv) the title begins with an acronym or initialism. In this case a cross reference is provided from the expansion of the acronym to the acronym itself. Some very commonly used acronyms or initialisms, e.g. IEEE are not expanded.

List of Journals

The 2,918 journal titles listed below are regularly received and scanned by INSPEC for its information services. The 600 titles marked † are those journals from which all articles are normally abstracted. Any changes in title are indicated. Where a journal has had more than one change of title, an entry is included for each title.

The entries are arranged in alphabetical order of abbreviated title on the nothing-before-something principle.

List of other Serial Sources

The 376 publications listed below are those non-journal serials which are regularly scanned for the INSPEC database. These include book series, numbered report series, conference series etc. It should be noted that although these publications are regularly scanned for the INSPEC database they are treated individually as separate books, reports, conferences etc. rather than under the serial title.

The entries are arranged in alphabetical order of abbreviated title on the nothing-before-something principle.

The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 5p.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

ELECTRONIC WARFARE

A special issue of the IEE Proceedings, Part F

Editors: M. C. Pinches, Dr. J. Clarke, Dr. P. M. Grant.

Electronic warfare techniques were initiated during the Second World War as radio countermeasures. It is now appreciated that the capability to detect the location of enemy equipments and deploy effective countermeasures is very effective in minimising hostile threats and maximising the effectiveness of one's own weapons.

The fast build up in arms and the significant advances in signal processing techniques over recent years have stimulated interest in electronic warfare to such an extent that the projected international western-world budget is currently in excess of £3,000 million.

This special issue provides an insight into the most recent developments in electronic support measures, electronic countermeasures, and electronic counter countermeasures.

Available now for only £12.00 ($27.00)

VISION AND SOUND

A special issue of the IEE Proceedings, Part A

Editors: Dr. B. Townsend and P. J. Darby MBE

Available now for only £12.00 ($27.00)

Since 1978, when the IEE published a special issue of *Electronics Record* on 'Pal colour television', the broadcasting world has altered dramatically.

This special issue covers developments in the whole field of broadcasting and programme distribution, and in the related aspects of home entertainment and information technology, together with reviews of the future trends within these different areas.

The scene is changing rapidly, but it is possible to look with pride on existing achievements as we contemplate the exciting developments which are likely to affect us in the near future.

IN-DEPTH COVERAGE OF

- **Digital television coding standards**
- **Digital techniques in the future television studio**
- **Digital television networks**
- **Development of video cameras and recorders for lightweight television production**
- **Digital techniques in film scanning**
- **The Television Consistency Index: Formulation and preliminary tests**
- **Cable television**
- **Transportable satellite up-links: Towards SNG?**
- **Television receiver design: Recent trends and applications**
- **Direct broadcasting from satellites**
- **Extended-definition television service**
- **Unattended television and radio transmitters**
- **Radio and television studio testing**
- **Enhanced UK teletext: Level 4 alphageometrics**
- **Wind- and sun-powered transmitters**
- **Citizens-band radio**
- **Multiple sound channels in satellite broadcasting**

SPECIFICATION AND TASKING IN

ADA

A special issue of the IEE Proceedings, Part E

Edited by Dr F.K. Hanna

Augusta Ada, Countess of Lovelace
Reproduced by kind permission of the Controller of HMSO

Available now for only £12.00 ($27.00)

The development of the programming language Ada represents one of the largest software engineering projects ever undertaken.

It may also turn out to be one of the most significant.

It is indisputably one of the most controversial.

Ada is intended for use by the professional software engineer involved in writing specifications and programs for embedded computer systems.

Ada is still at an early stage in its life; the first compilers are just becoming available and the first test programs are just being run.

This exciting special issue features:

- **Axioms and proof rules for Ada tasks.** *H. Barringer and I. Mearns*
- **Ada package specifications: path expressions and monitors.** *Prof. S.J. Goldsack and T. Moreton*
- **Program verification and Ada.** *A.D. McGettrick*
- **Structure and tasking features of the programming language Martlet.** *Prof. R.L. Grimsdale, F. Halsall, F. Martin-Polo and S. Wong*
- **Specifying and implementing object manager in Ada.** *W.T. Harwood*
- **Ada model arithmetic: costs and benefits.** *P.J.L. Wallis*

Bibliographical details:

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC database. Information is dispatched weekly on 150 mm × 100 mm (6" × 4") cards.

TOPICS

This is an SDI service based on standard profiles. There are over 70 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.
